

Figure 1 Relation of PF-GIC, FHWC, RIC, and PF-FVAC

An arrowhead points to the larger of the two quantities being compared. For example, the diagonal arrow indicates that $\mathbf{p} < \mathsf{R}^{1/\rho}\Gamma^{1-1/\rho}$, which is one way of writing the PF-FVAC, equation (24)

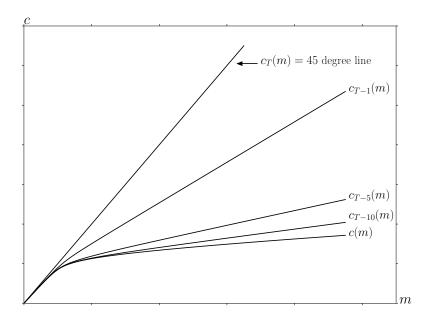

Figure 2 Convergence of the Consumption Rules

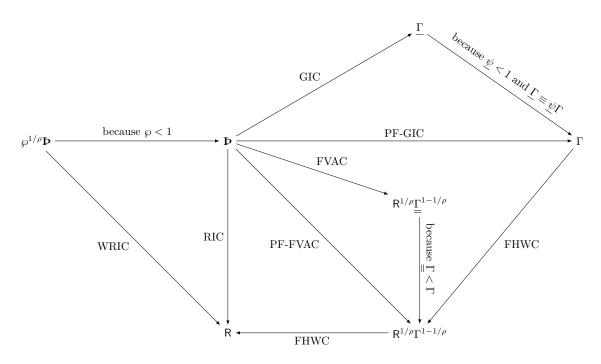

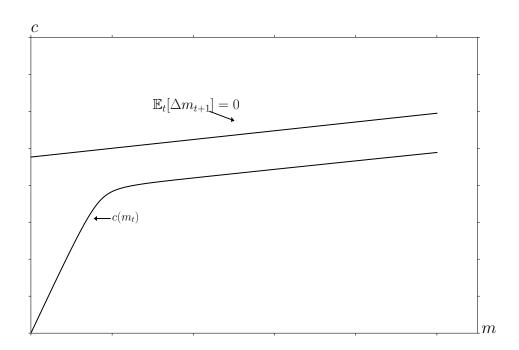

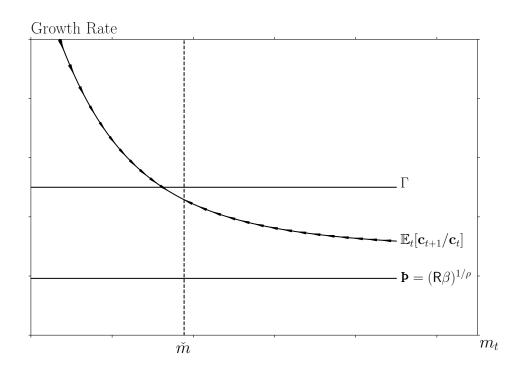

Figure 3 Relation of All Inequality Conditions See Table 2 for Numerical Values of Nodes Under Baseline Parameters

 ${\bf Figure~4}~~{\rm Example~Solution~when~FVAC~Holds~but~GIC~Does~Not}$
